

## **How to Stimulate Our Economy?!!**

### **Build a Global Green Village in your city.**

Global Green Village (GGV) allies commercial, government, and non-profit organizations seeking to revitalize our economy by designing a “GreenPrint” for 21st century community development.

Now is the time to bring new thinking to how our communities are designed, and to the economics of community development. Fresh thinking...better thinking - to transform our cities.

Create jobs. Increase revenues coming into our cities. Reduce our dependency on foreign oil. Increase demand for U.S. made green technologies. Fight global warming.

We can bring economic benefits to our cities by developing communities that people want to work, live, and play in. We can develop communities that reflect the lifestyles and values that we desire, today.

### **Can all of this come from building Global Green Villages? Yes!**

Through collaboration...by establishing new financial approaches...by integrating our individual knowledge bases...through innovative problem solving – and through common purpose, we can revitalize our economy while building communities that meet today’s needs.

Join us at The Global Green Village by working to develop this “GreenPrint” for revitalizing America. Yes, we CAN do it!

### **Collaborate. Design. Integrate. Build...The Global Green Village**

Learn how our companies, our employers, our governments, our financial institutions, our green technology developers, our builders, and YOU can create these communities in Silicon Valley, the San Francisco Bay Area, and throughout America.
